WHAT'S NEW IN PANDORA FMS 7.0 NG 716

This last Pandora FMS 7.0 NG update package contains several improvements and visual changes and includes the resolution of some problems. Here is a list of the most important changes.
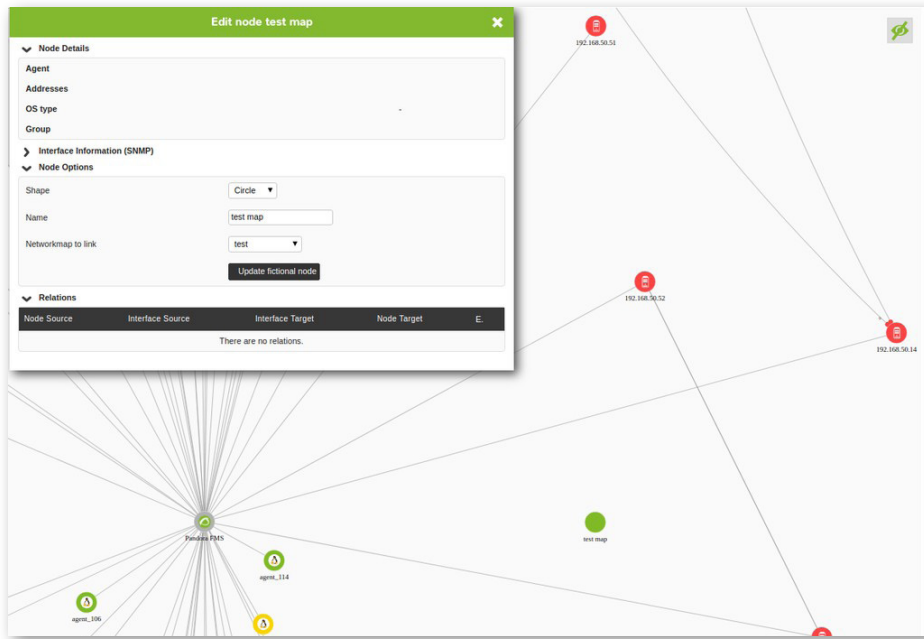

Improvements

* It is now possible to **create empty network maps manually** and not automatically calculate relationships.

* **New feature that allows multiple visual consoles within the same dashboard** to look like individual dashboards in slide mode.

* **Macros have been added to the visual console tags** so that when the consoles are generated through the CLI, all the necessary tags can be added automatically.

* Added **advanced functionality in the visual consoles, which allows to have access control to the visualization of contents in the consoles**. In this way, it is possible to present different contents in the same visual console depending on the group/profile to which the user belongs.

* The limit of characters allowed in the email addresses for scheduled tasks has been increased.

* Network map management flow has been improved for better operation.

* ISO kernel optimization.

* **New feature to specify thresholds** when displaying the status of a parent visual console associated with a static image.

* **Added to the CLI all new fields of visual consoles** for the creation and editing of visual consoles.

* **New feature that allows to select (via token) whether or not to save the password** to the database when using LDAP authentication.

* A **new tags view has been added** so that users with tag permission restrictions have a reliable view where the information is reflected correctly.
* Improved text search in visual consoles.

Visual Improvements

* Improved **visual aspect of the SNMP** interface Wizard.

* Improvements in the visualization of network maps.

* Added the **ability to choose the level of objects in the Visual Console**, allowing an object to always be one layer above the others and so it can't be hidden by another element that overlaps.

* The positioning of the elements in the visual consoles of the meta console has been optimized.

* Changes made to the event view for better performance in event viewing.

* A **feature has been included to save the positioning and zoom** that we want to establish in a network map.

* **Optimized mobile APP configuration** for event viewer.

Problems solved

* Fixed problem with the advanced cron options in modules.

* Fixed bug in public links of dashboard elements.

* Fixed bug with HTML entities when events are created with Pandora FMS server.

* Fixed errors in scheduled tasks due to SSL validation failure.

* Fixed problem when moving an element in an agent.

* Fixed bug in SNMP monitoring.

* Fixed meta console bug when changing permissions in Active Directory.

* Fixed bug in dashboard cells.
